DIGITAL WORKER

A SOAIS customer story – RPA with Certify

A Silicon Valley based SOAIS' Customer with offices across 17 countries and \$17.3 B revenues uses Worksoft Certify extensively for test automation of their SAP applications. For back-office operations, reviewing SAP user activity data was a critical business need. It was a daily manual activity to download usage data from SAP, update the Excel output with data from another source, upload the file into a Shared Drive for Tableau to generate management dashboards. SOAIS team worked with the customer to use Worksoft tools to automate this complete activity right from downloading SAP data to uploading file for Tableau. Human power (1 FTE) was now available for more productive activity.

SMALL START... LONG JOURNEY

WS CERTIFY ON PRODUCTION

When you build a test case with Worksoft Certify, you are capturing the exact actions of a real user, key by key, field by field, system by system. With a bit of variabilization, that same automation can be run in production to eliminate many repetitive manual tasks - easily saving time and money. Every day Worksoft customers uncover new ways to leverage automation to eliminate hours of repetitive manual tasks in their organizations.
