

Dear Default Value,

Welcome to SOAIS Newsletter of August 2021!

Closed-Loop Automation

Boost efficiency. Optimize processes. Deliver optimal end-user experiences. These are the mandates of the post-digital age, an era in which enterprise landscapes are a labyrinth of complex, disparate, and distributed assets used to drive business process execution in fast-paced, ever-changing environments. While automation has the potential to help organizations achieve their objectives to do more with less, traditional automation that's brittle and disconnected cannot deliver scalable, ongoing value. Join Worksoft on August 26 at 10:00 AM CT/15:00 UTC to explore how a closed-loop approach to automation breaks down barriers between systems, teams, and data analytics to facilitate business and IT alignment, enabling faster time to value with reduced risk and rework for digital transformations.

Evaluation Criteria for Automation Solutions

Automation can deliver significant benefits to many parts of your organization in the form of time savings, risk and cost reduction, and improved quality. But one size never fits all and there are several factors to consider when choosing an automation solution. Selecting an automation solution and determining how to apply automation effectively at your organization could arguably be considered two of the most important decisions today's business leaders will face in their careers. While research like analyst reports can be a great resource for identifying vendor options, they rarely give a full picture of the market.

SOAIS Blog – Image Object Tool

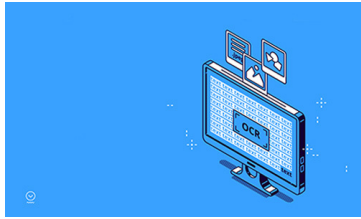

Image objects tool is to define the Silverlight and PRIMO graphical objects that cannot be discovered with live touch and Silverlight learn. A graphical object is an object that is defined by a collection of one or more graphical images in an application window. Using Optical Character Recognition (OCR) software, it can be used to define images to represent image, button and textbox.

Worksoft Blog – Connective Automation Smooths S/4HANA Migration

The transition to SAP S/4HANA is one that any organization using SAP will eventually have to make, and the better prepared your business is, the more smoothly your migration will go. While the end of maintenance deadline for SAP ECC has been extended from its original 2025 deadline, SAP reports that more than 16,000 subscribers have already made the transition to SAP S/4HANA to take advantage of advanced analytics, lower ROI costs, better integration with other SAP products and improved end-user and business satisfaction..
