

Dear Default Value,

Welcome to SOAIS Newsletter of December 2021!

A TDM - Test Data Management solution

With so many different tools and methods in the market, how do you choose the right test data management solution (TDM)? By now, you've probably realized there is no simple answer to this question, especially when looking for a solution to test complex end-to-end business processes and systems like SAP that involve a mix of both web-based and traditional Windows-based UIs. SAP enterprise landscapes are highly complex and interrelated. To get good test data, referential and logical integrity must be preserved, and not all relationships are explicit. Data has to be correlated across tests and systems. The data needs to have the context of the business process being executed, positive or negative test, standard orders, or out-of-stock orders, etc. Most test data management tools on the market generate data based on a single set of functional requirements and lack the ability to correlate data across a horizontal end-to-end business process test.

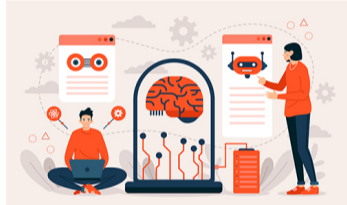

Leverage the full-potential of your technical staff and improve business outcomes

The high-tech manufacturing industry has experienced its fair share of challenges over the past few years. According to a past Industry Week survey, organizations are broadly "concerned about finding and training skilled workers, the lack of soft skills in new recruits, implementing new technology effectively on the shop floor and pressure from foreign competition to name a few." An article posted on [AdvancedManufacturing.org](#) expresses similar trepidation, noting that a lack of qualified workers is a major source of stress across the industry. The article goes on to say that "The use of advanced technologies across manufacturing operations requires workers with a higher level of training and skills." While companies struggle to locate qualified resources equipped to handle advances in technology, the demand for on-time and on-budget project completion never stops.

Worksoft Blog – Black Friday and Business Process Assurance

As we enter the holiday season with full force, retailers and manufacturers around the globe are hoping they are prepared to meet the demand. From clothing to cars to chocolates, it's the most wonderful time of year for many organizations' bottom line. Whether these holiday purchases are happening on the store floor or through online channels, all the transactions are going through at least one electronic system. And then there's manufacturing, supply chain management and every other step in between.

Please click [here](#) and read the complete blog.

Since the holiday season is upon us, we won't leave you without a wish and a bag full of reverence.

Merry Christmas in advance!
